EDUCATION

Master's in AI and Machine Learning Operations (MLOps)

SVKM's Narsee Monjee Institute of Management Studies

GPA: 3.40/4.0

Mumbai, IN

TECHNICAL SKILLS

Programming: Python, Git, REST APIs, Pandas, NumPy, Scikit-learn, Plotly

Machine Learning: PyTorch, HuggingFace, Computer Vision, Transformers, GANs, LLM Fine-tuning

MLOps and Infrastructure: Docker, Jenkins, MLflow, CI/CD, Model Registry, Model Monitoring

Cloud Platforms: AWS, Azure, Google Cloud Platform

Data Engineering: Apache Spark, SQL, Data Pipelines, ETL, Great Expectations

EXPERIENCE

Data Engineer

Oct 2022 – Oct 2023

Group Data and Analytics, Aditya Birla Management Corporation

Bengaluru, IN

- Designed and implemented data ingestion pipelines using Azure Data Factory to ingest, transform, and load complex datasets into the Data Lake - ADLS Gen 2.
- Developed and maintained processes for handling nested JSON files, ensuring data integrity and accessibility.
- Optimized data processing and storage solutions for performance and cost-efficiency, identifying bottlenecks.
- Developed a proof-of-concept solution using Apache Spark and Great Expectations to demonstrate feasibility of implementing a data validation framework.
- Communicated with stakeholders to understand their needs and translated their feedback into actionable insights.
- Standardized documentation procedures across projects, facilitating knowledge transfer for future developers.

PROJECTS

End-to-End ML Pipeline Deployment | Python, Docker, Google Cloud Platform, Streamlit

Dec'23 - Mar'24

- Architected and deployed a production-grade ML pipeline processing 100K+ customer records.
- Analyzed customer data to identify churn patterns using VertexAI, and created an user-interface using Streamlit.
- Reduced deployment time by 60% using containerized deployment with Cloud Build and Cloud Run.
- Implemented version control for ML models using Model Registry.

Automated Football Video Analysis | Python, OpenCV, Ultralytics

May'24

- Built scalable player tracking system processing 1080p videos at 30 FPS.
- Implemented optical flow to track player movement and distinguish from camera motion.
- Implemented real-time performance metrics calculation handling multiple object tracking.

BCG Data Science Job Simulation | Python, Pandas, NumPy, Plotly, Scikit-learn

May'24

- Conducted efficient data analysis, and employed data visualization techniques for insightful trend interpretation.
- Completed the engineering and optimization of a random forest model, achieving an 85% accuracy rate in predicting customer churn.
- Completed a concise executive summary, delivering actionable insights for informed decision-making based on the analysis.

Image Segmentation with Meta's SAM2 Model | Python, PyTorch, CUDA

Aug'24

- Implemented Segment Anything Model (SAM2) for advanced image segmentation tasks using PyTorch and CUDA.
- Developed an automatic mask generator for object segmentation and an interactive point-based segmentation system.
- Demonstrated potential applications in object detection, image editing, and computer vision research.
